

ADJUSTABLE USER INTERFACE

ABSTRACT

The present invention is directed to an adjustable user interface. A method of configuring a user interface of an information handling system based on utilization of ports included with the information handling system may include monitoring a plurality of ports included on the information handling system. Utilization by a device of a port of the plurality of ports is monitored, the device communicatively coupled to at least one port of the plurality of ports. A user-interface operating on the information handling system is configured based on the determined utilization by the device of the port of the plurality of ports.
